

Level 1, 2, & 3 Charging Kiosk

Electric Vehicle Park

Solar Powered Grid Integrated StreetLight
with Level 1 Charging

Geo Thermal Heated Pool

Level 2 Bollard Mounted Double Charger

Bike Sharing

Neighbourhood Electric Vehicle
Sharing

Electric vehicle (EV) parks should be provided by towns, cities, residential communities, or commercial government entities as places for EV owners to charge their vehicles. As owners go about their day to day activities like dog-walking, picnicking, playing sports, hiking, and bike riding their vehicle can be simultaneously charged. EV enthusiasts should expect to see more and more places like this to provide a setting for a modern, healthy lifestyle.

EVI believes that EV parks will be a necessary part of the future, whether in a rural or city environment, an EV park should have comprehensive Level 1, 2, & 3 charging for EVs, solar powered lighting, geothermal pools, neighborhood electric vehicle (NEV) sharing stations, Electric bike sharing and more eco-friendly technologies. EVI sees this unique concept as a new environmentally conscious way of living.
